

## **1    ABSTRACT OF THE DISCLOSURE**

2            A sheet cutter for making business cards is composed of an upper cover,  
3    a seat mounted beneath the upper cover, a transversal blade assembly and a  
4    longitudinal blade assembly. By using the transversal blade, a sheet printed with  
5    multiple business card details in rows and columns can be conveniently cut into  
6    individual business cards along the longitudinal and transversal directions.
